

# Microsoft SQL Server Business Intelligence Launchpad

This one-day hands on course is designed to show attendees how Microsoft SQL Server 2008 can be used to solve different types of business intelligence problems, from data warehousing to real-time operational reporting and analytics. Attendees will learn how to use the SQL Server BI toolset to collect data from heterogeneous data sources and then display the data in a meaningful format to assist in making business decisions and then measure and monitor the results. This course provides an end-to-end overview of the entire SQL Server BI stack from extracting data using Integration Services to building cubes with Analysis Services and then displaying the results using SSRS.

## Who Should Attend:

This course is intended to provide an overview of the Business Intelligence features in SQL Server 2008. The course is designed for all types of BI users that are looking to expose real-time, powerful business intelligence with Microsoft SQL Server including Database Administrators, Developers and Analysts.

## Course Objectives:

Attendees will achieve an end-to-end understanding of how Microsoft SQL Server 2008 can be used for data warehousing, real-time operational reporting and analytics. At course completion attendees will have an understanding of how to design, build, implement and maintain Business Intelligence projects built using SQL Server 2008.

## Course Outline:

**Module 1: Introduction to Business Intelligence**

**Module 2: Extract, Transformation and Load**

**Module 3: Introduction to Analysis Services**

**Module 4: Reporting Services Overview**

**Module 5: Designing and End-to-End Solution**

**Microsoft**  
**GOLD CERTIFIED**
