

Performance Tuning & Optimising SQL Databases

This four-day instructor-led course provides students who manage and maintain SQL Server databases with the knowledge and skills to performance tune and optimize their databases.

Who Should Attend:

The primary audience for this course is individuals who administer and maintain SQL Server databases and are responsible for optimal performance of SQL Server instances that they manage. These individuals also write queries against data and need to ensure optimal execution performance of the workloads.

The secondary audiences for this course are individuals who develop applications that deliver content from SQL Server databases.

Course Prerequisites:

In addition to their professional experience, participants should already have:

- Basic knowledge of Microsoft Windows operating system & its core functionality
- Working knowledge of database administration & maintenance
- Working knowledge of Transact-SQL

Course Objectives:

After completing this course, participants will be able to:

- Describe the high level architectural overview of SQL Server & its various components.
- Describe the SQL Server execution model, waits & queues.
- Describe core I/O concepts, Storage Area Networks & performance testing.
- Describe architectural concepts & best practices related to:
 - data files for user databases & TempDB.
 - Concurrency, Transactions, Isolation Levels and Locking.
- Describe architectural concepts of the Optimizer & how to identify and fix query plan issues.
- Describe architectural concepts, troubleshooting scenarios and best practices related to Plan Cache & troubleshooting strategy & usage scenarios for Extended Events.
- Explain data collection strategy and techniques to analyze collected data.
- Understand techniques to identify & diagnose bottlenecks to improve overall performance.

Course Code: 10987A

Course Duration: 4 Days

Course Summary

Module 1: SQL Server Architecture, Scheduling, and Waits

Module 2: SQL Server I/O

Module 3: Database Structures

Module 4: SQL Server Memory

Module 5: Concurrency and Transactions

Module 6: Statistics and Index Internals

Module 7: Query Execution and Query Plan Analysis

Module 8: Plan Caching and Recompilation

Module 9: Extended Events

Module 10: Monitoring, Tracing & Baselineing

Module 11: Troubleshooting Common Performance issues

Course Outline

Module 1: SQL Server Architecture, Scheduling & Waits

This module covers high level architectural overview of SQL Server and its various components. It dives deep into SQL Server execution model, waits and queues.

Lessons

- SQL Server Components and SQL OS
- Windows Scheduling vs SQL Scheduling
- Waits and Queues

Lab

- SQL Server Architecture, Scheduling & Waits

Module 2: SQL Server I/O

This module covers core I/O concepts, Storage Area Networks and performance testing. It focuses on SQL Server I/O operations and how to test storage performance

Lessons

- Core Concepts
- Storage solutions
- I/O Setup and Testing

Lab

- Testing Storage Performance

Module 3: Database Structures

This module covers Database Structures, Data File and TempDB Internals. It focuses on architectural concepts and best practices related to data files for user databases and TempDB

Lessons

- Database Structure Internals
- Data File Internals
- TempDB Internals

Lab

- Database Structures

Module 4: SQL Server Memory

This module covers Windows and SQL Server Memory internals. It focuses on architectural concepts and best practices related to SQL Server Memory Configuration

Lessons

- Windows Memory
- SQL Server Memory
- In-Memory OLTP

Lab

- SQL Server Memory

Module 5: Concurrency & Transactions

This module covers Transactions and Locking Internals. It focuses on architectural concepts and best practices related to Concurrency, Transactions, Isolation Levels and Locking

Lessons

- Concurrency & Transactions
- Locking Internals

Lab

- Concurrency & Transactions

Module 6: Statistics & Index Internals

This module covers Statistics and Index Internals. It focuses on architectural concepts and best practices related to Statistics and Indexes.

Lessons

- Statistics Internals and Cardinality Estimation
- Index Internals
- Columnstore Indexes

Lab

- Statistics & Index Internals

Module 7: Query Execution and Query Plan Analysis

This module covers Query Execution and Query Plan Analysis. It focuses on architectural concepts of the Optimizer and how to identify and fix query plan issues.

Lessons

- Query execution and optimizer internals
- Analyzing query plans

Lab

- Query execution and query plan analysis

Module 8: Plan Caching and Recompilation

This module covers Plan Caching and Recompilation. It focuses on architectural concepts, troubleshooting scenarios and best practices related to Plan Cache.

Lessons

- Plan cache internals
- Troubleshooting plan cache issues
- Query store

Lab

- Plan Caching and Recompilation

Module 9: Extended Events

This module covers Extended Events. It focuses on architectural concepts, troubleshooting strategy and usage scenarios for Extended Events.

Lessons

- Extended events core concepts
- Implementing extended events

Lab

- Extended Events

Module 10: Monitoring, Tracing, and Baselineing

This module covers tools and techniques to monitor, trace and baseline SQL Server performance data. It focuses on data collection strategy and techniques to analyze collected data.

Lessons

- Monitoring and Tracing
- Baselineing and Benchmarking

Lab

- Monitoring, Tracing and Baselineing

Module 11: Troubleshooting Common Performance Issues

This module covers common performance bottlenecks related to CPU, Memory, IO, TempDB and Concurrency. It focuses on techniques to identify and diagnose bottlenecks to improve overall performance.

Lessons

- Troubleshoot CPU performance
- Troubleshoot memory performance
- Troubleshoot I/O performance
- Troubleshoot Concurrency performance
- Troubleshoot TempDB performance

Lab

- Troubleshooting Common Performance Issues
