### Overview

The goal of this course is to provide students with the technical skills required to write basic VBScript and Visual Basic<sup>®</sup> applications using SQL-DMO to query and obtain administrative information from Microsoft SQL Server<sup>™</sup> 2000

### Skills Gained

- Basic VBScript knowledge
- Basic knowledge of creating a VB.Net application
- Understanding of the SQL-DMO object model
- How to programmatically retrieve information from multiple Microsoft SQL Server<sup>™</sup> 2000 instances
- Perform programmatic backup and restore operations
- Manage logins and security
- Monitor and control SQL Server<sup>™</sup> Agent jobs
- Manage database cardinality
- View and set Microsoft SQL Server<sup>™</sup> 2000 options
- Create a basic monitoring application

### Target Audience

This course is intended for database administrators, implementers, system engineers, and developers who are responsible for managing Microsoft SQL Server<sup>™</sup> 2000

### Prerequisites

- Experience using a Microsoft Windows<sup>®</sup> operating system
- Experience using Microsoft SQL Server<sup>™</sup> 2000
- Basic understanding of Programming concepts
